

Special Issue

The Estrogen Receptor and Its Role in Cancer

Message from the Guest Editors

Estrogen-directed therapy has been the mainstay of treatment of both early-stage and metastatic breast cancer for decades. Recent genomic and molecular advances have provided new insights into the mechanisms of resistance to these commonly utilized drugs, and a variety of new agents and strategies are under active preclinical and clinical development. Expanding our understanding of the role the estrogen receptor plays in breast (and other) cancers, continuing to explore the biological basis of resistance to hormonal therapy, and developing new strategies for clinical deployment remain important priorities for the cancer research community. We are pleased to invite you to participate in this Special Issue, focused on the estrogen receptor and its role in cancer progression and drug resistance. This issue will be an opportunity to present articles both summarizing the tremendous progress in this area to date as well as presenting new and exciting advances in this field. We welcome articles for consideration related to basic science, translational research, and clinical studies in breast cancer (and other relevant tumor types).

Guest Editors

Dr. Seth A. Wander

Massachusetts General Hospital, Department of Medicine, Division of Hematology and Oncology, Boston, MA, USA

Prof. Dr. Todd W. Miller

Department of Pharmacology & Toxicology and Pathology, Medical College of Wisconsin, Milwaukee, WI, USA

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
