

## Special Issue

# Breast Cancer Biology and Treatment

### Message from the Guest Editor

Breast cancer is a world-wide, common malignant disease. In the last decade, researchers have demonstrated that breast cancer is highly heterogeneous. Intrinsic subtypes, *i.e.*, categories of breast cancer with different gene expression profiles have distinct biological behaviors and responses to therapy. This novel classification, which does not represent pathological morphology nor tumor burden, has enabled us to understand that breast cancer is not one disease; personalized therapy based on each subtype may be critical. In this special issue of *Cancers*, we invite research and review articles that discuss clinical features, cancer biology, and the current management of, and future diagnostic and therapeutic strategies for, breast cancer.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
