

Special Issue

Cell Stress, Metabolism, Tumor Microenvironment in Ovarian Cancer

Message from the Guest Editors

Ovarian Cancer is the most lethal malignancy of the female reproductive system. Understanding of ovarian cancer initiation, progression, and metastasis is crucial to overcoming the disease. Genome, transcriptome, and proteome studies have shown that the ovarian tumor microenvironment (TME) plays a vital role in the tumorigenesis and progression of ovarian cancer. This Special Issue is aimed at highlighting recent studies on how various ovarian cancer cell intrinsic stresses, including DNA replication stress, DNA damage, genomic, epigenomic, transcriptomic changes, and metabolic reprogramming, impact the tumor microenvironment and ovarian cancer progression and treatment.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
