Cancer Stem Cells and Tumor Microenvironment

Message from the Guest Editor

Dear Colleagues Cancer stem cells or tumor initiating cells overexpress specific intra- and extra-cellular markers that result in their tumorigenic and high metastatic activity. In addition, the unique intracellular signaling and metabolism of cancer stem cells drive aggressive behavior of these cells. Cancer stem cells cross talk with microenvironment components: immune cells, blood vessels, fibroblasts, extracellular matrix proteins), which is important to understand for future development of anti-cancer therapeutics. The genomics, proteomics, and metabolomics technology should be applied to the characterization of these cells and microenvironment to develop personalized medicine approaches.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
