Immunohistochemistry and Cancer Diagnosis

Message from the Guest Editor

Immunohistochemistry is a pivotal tool allowing to quickly perform the diagnosis of many cancers, but also to establish the prognosis of some of them. More recently, IHC, through the use of new biomarkers, can be predictive of responsiveness of some targeted therapies. In this latter field, a couple of antibodies have been developed and can be routinely used to predict the efficiency of drugs targeting some genomic alterations; not only some mutations, but also some rearrangements. This Special Issue will highlight the current development of IHC in cancer: it will provide, i) a practical approach in the interpretation and immunohistochemical selection of lung/pleura-based neoplasms obtained from small biopsy and cytological samples, ii) the use of new predictive biomarkers which can provide results essential for timely and accurate therapeutic decision making in the era of the so called stratified medicine, iii) some algorithms using IHC for improvement of CUP diagnosis, and iv) the interest to get accreditation in IHC for a pathology laboratory to ensure a high quality level of the results.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
