

Special Issue

Current Concepts in the Diagnosis and Treatment of Cutaneous Melanoma

Message from the Guest Editor

In regard to the diagnosis of melanoma, possible topics of interest may include: histopathology and diagnostic reporting of cutaneous melanoma, diagnostic markers (immunohistochemistry and molecular methods such as PCR, FISH, array CGH), dermatoscopy as a clinical diagnostic tool (including digital dermatoscopy), whole body skin examination with digital photography, imaging studies, etc. In regard to the treatment of melanoma, possible topics of interest may include: surgery, therapeutic and prognostic value of lymph node dissection, chemotherapy (interferon), radiotherapy, tumor vaccines, cellular therapy (tumor infiltrating lymphocytes), and gene therapy (educated T-cells targeting tumor cells), etc.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
