Mitochondrial Functions in Cancer

Message from the Guest Editors

Mitochondria are bioenergetic organelles that are believed to originate from a symbiotic relationship established between archaebacteria and the ancestors of eukaryotic cells. They comprise an outer and an inner membrane that delineate an intermembrane space, and an inner matrix hosting a short, circular DNA and several enzymes orchestrating, e.g., the tricarboxylic acid (TCA) cycle. In tumors, cancer cells (and host cells) strive to simultaneously ensure optimal energy production and biosynthesis with local resources that are often limited. The balance between these activities depends on mitochondrial functions that can oscillate between ATP production and biosynthesis. Mitochondria also participate in cancer cell immortalization and may act as metabolic sensors of the tumor microenvironment. Upon treatment, they can be damaged and repaired, thus participating in resistance to therapy. This Topic issue in *Cancers* aims to address these functions, with a key interest for the relationship between mitochondria and specific phenotypic changes occurring during tumor growth and treatment.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
