Supportive and Palliative Care in Oncology

Message from the Guest Editor

Timely palliative and supportive care can not only make a difference to quality of life, but excellent symptom management can prolong life and symptom management can also allow patients to access trials and further palliative therapies if indicated and if it is the patient's choice. Palliative care is not just about attention to physical symptoms but also to the many psychological symptoms that our patients experience, including depression, which not only impairs quality of life but also reduces survival. As patients are living longer with life-limiting illness, the close integration of oncology and palliative and supportive care is more important than ever. An ever ageing population, many of whom have co-existing multiple morbidities along with a cancer diagnosis, can also make difficult treatment decisions even more challenging. This Special Issue will inform clinicians, academics and commissioners of the key developments in supportive and palliative care in oncology and will address issues of communication, symptom control, trials and emerging therapies along with systematic reviews.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
