

## Special Issue

# Understanding the Role of the Microenvironment in the Progression of Tumors

### Message from the Guest Editors

Tumor cells coexist and communicate with the rest of the cells present in the tissue where the tumor is generated. Stromal fibroblasts, the various cell types of the blood vessels, and the immune system cells also play an essential role in tumor progression. However, in addition to the cellular components of the tissues, other environmental factors are capable of altering the fragile balance of tumors (oxygen, extracellular matrix deposition, pH, interstitial pressure, etc.). All these previously mentioned factors (cellular and non-cellular) form what is known as the tumor microenvironment.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

---

### Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
