## Molecularly Imprinted Polymers—Molecular Recognition

### Message from the Guest Editor

The most prominent strategy in modern chemistry focuses on molecular recognition for molecules and ions but also supramolecular complex systems. Analytical applications for MIPs are obvious; commercially, progress is made especially for solid phase extraction to guarantee a selective enrichment by sample preparation. Further straightforward developments are the design of separation materials for HPLC via MIPs. More chances arise for MIP design as coatings for sensors. Thus, lean molecules; polymer particles up to viruses and bacteria; and other cells can be adhered to MIPs. In this way, synthetic antibodies can be realized. Even catalytic MIPs which imitate antibodies and enzymes are of increasing interest. The binding of molecules and particles to MIPs makes it possible to design selective delivery systems, especially for drugs.

# About the Journal

## Message from the Editor-in-Chief

---

### Editor-in-Chief

Prof. Dr. Craig E. Banks  
Faculty of Science and Engineering, Manchester Metropolitan  
University, Chester Street, Manchester M1 5GD, UK

---

### Author Benefits

#### High Visibility:

indexed within ESCI (Web of Science), Scopus, CAPlus /  
SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 24.3 days after  
submission; acceptance to publication is undertaken in 3.9  
days (median values for papers published in this journal in  
the first half of 2025).
