## Novel Applications of Carbon Nanotube-Based Materials

### Message from the Collection Editor

Dear colleagues, This Special Issue is specifically dedicated to novel and conceptual applications of carbon nanotube structures and materials based on carbon nanotubes. Applications include sensing via piezoresistive, piezo-impedance, thermoresistive, chemoresistive and electrochemical, magnetoresistive or piezoelectric approaches; electronics including transistors, cooling, field emission, photodetection or data transmission; chemical, biological and medical; catalysis; energy and gas storage; filters and membranes; fiber, fabrics, or reinforcements; probing; and others. Papers may be based on experimental, numerical, or analytical studies. Entirely novel applications may include the rationale and a theoretical section.

---

### Author Benefits

#### High Visibility:

indexed within ESCI (Web of Science), Scopus, CAPlus /  
SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 24.3 days after  
submission; acceptance to publication is undertaken in 3.9  
days (median values for papers published in this journal in  
the first half of 2025).
