Dr. Elena A. Redina

Laboratory of development of
the polyfunctional catalysts, N.D.
Zelinsky Institute of Organic
Chemistry, Russian Academy of
Sciences, Moscow, Russia

Dr. Anastasiya A. Shesterkina

Laboratory of nanochemistry and
ecology, National University of
Science and Technology MISiS,
Moscow, Russia

Message from the Guest Editors

This Special Issue will provide information on recent advances in the synthesis of mono- and bimetallic nanoparticles for applications in the catalytic processes, as well as studies on the structure of nanoparticles and their catalytic behaviour. We welcome papers focusing on novel synthesis methods of metallic nanoparticles for diverse applications in catalysis, especially in novel promising reactions and processes. Variations in procedures of known methods that result in strong improvement of the catalytic properties are of interest as well. Studies of the systems “no noble metal – support” and “noble metal – no noble metal – support”, as well as the use of metal oxide combinations as supports or supported phases, are of particular interest. We encourage the submission of all types of papers, including communications, research, and review papers, that cover all topics of innovative catalytic applications of mono- and bi-metallic nanoparticles.

Deadline for manuscript
submissions:

closed (31 July 2022)
