

Special Issue

Catalysis in Biomass Valorization

Message from the Guest Editors

Utilization of biomass for the production of energy and value-added chemicals became, in the previous decade, a very active area of research, leading to a number of industrial breakthroughs in the development of future biorefineries. The role of catalysis in the implementation of sustainable technologies for the conversion of non-edible biomass into biofuels and chemicals is vital. We invite contributions related to the use of catalysis for the valorization of biomass of different types (lignocellulosic, algal biomass, vegetable oils, etc.) into fuels, platform chemicals, and other value products (e.g., catalysis in synthesis of pharmaceuticals from extractives). The scope of this Special Issue also covers the preparation and characterization of catalysts. Papers on molecular insights in the processing of biomass with different catalysts (homogeneous, enzymatic, and heterogeneous) are strongly encouraged. Moreover, contributions related to catalytic reaction and reactor engineering, industrial demonstrations, and technoeconomic analysis of catalytic processes for biomass valorization are welcome.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn

Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
