

## Special Issue

# Metal Dispersed on Porous Supports as Catalysts for Methane-Related Reactions

### Message from the Guest Editors

This Special Issue of “Metal Dispersed on Porous Supports for Dry Reforming of Methane” is devoted to the search for new catalysts based on porous supports for reforming of methane by carbon dioxide (DRM). Submissions to this Special Issue are welcome in the form of original research papers and/or short reviews that reflect the current state of research in the DRM field, from catalysts syntheses to characterizations and catalytic performances testing. The dry reforming of methane has gained significant importance in the last decade, because of its advantage of greenhouse gas (carbon dioxide) valorization. Present efforts target the use of metal active phases other than noble metals, which are rare and expensive, but they face carbon deposition and metal sintering phenomena at the high temperatures required by the reaction. The issue will be attractive to researchers whose activities belong to the areas of physical chemistry, materials science, or applied catalysis and are focused on the studies of dry reforming of methane catalysts. Contributions dedicated to the development of catalysis are also welcome.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Keith Hohn  
Carl R. Ice College of Engineering, Kansas State University, Manhattan,  
KS, USA

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

##### Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science )

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.9 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the second half of 2025).
