Recent Development in Fischer-Tropsch Synthesis Catalysts

Message from the Guest Editor

This year we mark the hundredth anniversary of the discovery of Fischer-Tropsch synthesis (FTS). Moving into the second century of FTS research, the scientific community is meeting new challenges due to both novel scientific aspects of this inexhaustible chemistry and to earlier unforeseen ecological circumstances. This era of new interest has brought to life such new lines of development as hybrid catalysts, nano-effect-driven catalysis, high carbon efficiency technologies, and non-fuel Fischer-Tropsch products, to name but a few. The aim of this Special Issue is to cover promising recent research and novel trends in Fischer-Tropsch synthesis catalysts. Contributions from all areas of fundamental and applied catalysis science and technology, based on experimental results and/or mathematical modeling, would be of great interest.

Guest Editor

Prof. Dr. Vladimir Mordkovich

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn

Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
