

Special Issue

Advances in the Design and Characterization of Heterogeneous Biocatalysts

Message from the Guest Editors

Heterogeneous biocatalysts are of great relevance in the development of modern (bio)chemical manufacturing processes. Enzyme immobilization has a long-standing tradition, with many successful examples found at both academic and industrial level. The body of knowledge is well-established and there is a broad repertoire of methodologies for immobilization, involving different chemistries and carrier materials. This Special Issue aims at hosting original contributions dealing with advances in the design, application, and characterization of immobilized biocatalysts. The main topics are:

- Immobilized new enzymes and biocascades of high synthetic relevance;
- New techniques of immobilization dealing with enzyme activity or stability;
- New materials for enzyme immobilization;
- Immobilized enzymes in new reactor concepts: e.g. flow microreactors, intensifying reactions and reactors...
- Advances in the characterization of immobilized enzymes.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn

Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
