Special Issue

Electrocatalytic Hydrogen and Oxygen Evolution Reaction

Message from the Guest Editor

Oxygen evolution reaction (OER), as a fundamental half-reaction, is involved in water splitting and rechargeable metal-air batteries. While, the sluggish kinetics of its four-electron transfer process becomes a bottleneck to the performance enhancement. Thus, rational design and synthesis of electrocatalysts is of vital significance for boosting OER performances. Recently, developments and breakthroughs in experimental achievements on OER electrocatalysts are revealed. More perspectives and future directions are noticed and popular for further electrocatalytic performance enhancement and deeper understanding of design for electrocatalysts and principles. Here, extensive efforts are welcomed, which involves the following aspects: i) The novel synthesis of noble or non-noble metal electrocatalysts for boosting OER performances.
ii) The deeper insights of the understanding on theoretical calculations for OER;
iii) The efficient OER electrocatalysts that show outstanding OER performances for water splitting or metal-air batteries.

- oxygen evolution reaction
- oxygen reduction reaction
- electrocatalysts
- metal-air batteries
- water splitting
- hydrogen evolution reaction

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn
Carl R. Ice College of Engineering, Kansas State University, Manhattan, KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
