

Special Issue

Metal Oxide Semiconductors in Photocatalysis

Message from the Guest Editor

Since the groundbreaking work published by Honda and Fujishima in the 1960s on the electrochemical photolysis of water, the use of Metal Oxide Semiconductors in Photocatalysis has gained enormous attention, giving rise to a broad scope of applications. Although the potential of metal oxides semiconductors as catalytic platforms in organic synthesis was demonstrated decades later, efficient photocatalytic systems are being developed in order to achieve light-induced high-valuable organic transformations. This Special Issue aims to cover the application of Metal Oxide Semiconductors in Photocatalysis, especially to organic transformations such as C-C, C-heteroatom bond formation, and oxidations and reductions processes, as well as their use in continuous flow technology. Therefore, we welcome your contributions to the field in the form of research articles, communications, or short reviews that reflect the state of the research of the proposed topic.

Guest Editor

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn
Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.9 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the second half of 2025).
