

Special Issue

Catalysis for the Removal of Gas-Phase Pollutants

Message from the Guest Editor

Catalysis is playing an important role in the control of pollutants, and many of the technologies used for air pollutants abatement are based on the use of different catalysts. It is expected that the discovery and preparation of new materials and the understanding of the catalytic reaction mechanisms will result in the development of new catalytic technologies for the control of the gas-phase pollutants. Submissions to this Special Issue on “**Catalysis for the Removal of Gas-Phase Pollutants**” are welcome in the form of original research papers or short reviews that reflect the state of research on this important subject in the following topics: **catalytic control from stationary and mobile sources, catalysis for the reduction of greenhouse gases, catalytic abatement of NO_x, VOCs, SO_x, Cl-compounds, CO_x, ozone decomposition, household air pollution, catalytic oxidation and catalytic reduction of gas-phase pollutants, mechanisms for these reactions, and catalyst characterization and stability**.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn

Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
