

Special Issue

Catalysis Under Ultrasonic Irradiation

Message from the Guest Editors

The application of ultrasound waves to chemistry, called sonochemistry, has huge potential for innovation in eco-friendly and eco-efficient chemistry. Lately, the concept of sonocatalysis is attracting a lot of attention, where a synergistic effect between the catalyst and ultrasound occurs, paving the way for reactions that are usually not feasible under silent conditions. This synergistic effect between ultrasound and catalysis has been reported in the presence of solid catalysts. This Special Issue welcomes the submission of original research papers and review articles that describes sonocatalytic applications with a green chemistry approach. Manuscripts that pay particular attention to demonstrating this aspect, related to specific points or the overall process, are particularly welcome. Submissions encompassing the 12 principles of green engineering, with notions of scale-up, energy consumption, and the design of equipment will also be appreciated. New combinations of power ultrasound with alternative liquid media (ionic liquids), microwave irradiation, enzyme, electrochemistry, or other technologies will be also considered.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn
Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.9 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the second half of 2025).
