

Special Issue

Catalytic Processes for The Valorisation of Biomass Derived Molecules

Message from the Guest Editors

A lot of technologies have been explored for their one-pot conversion into chemicals, fuels and materials. However, in order to develop new catalytic processes for the selective production of desired products, a complete understanding of the molecular aspects of the basic chemistry and reactivity of biomass derived molecules is still crucial. This Special Issue aims to cover recent progress and advances in both reductive and oxidative valorization of cellulose, hemicellulose and lignin model molecules promoted by novel heterogeneous catalysts. In this framework, theoretical and computational models on reaction pathways leading to a target product and the interactions between reactants and catalyst surface will be important subjects for this Special Issue.

Guest Editors

Dr. Francesco Mauriello
Prof. Dr. Signorino Galvagno
Dr. Claudia Espro

Deadline for manuscript submissions

closed (31 December 2018)

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn
Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.9 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the second half of 2025).
