Catalytic Carbonylation Reactions

Message from the Guest Editor

Catalytic carbonylation reactions are the most important processes for the direct introduction of the carbonyl group into an organic substrate, and are of primary importance in both industry and academia. Thanks to the development of novel and more efficient and selective catalytic systems during the last decades, carbonylation reactions have allowed researchers to synthesize a plethora of functionalized molecules (heterocycles, in particular) under mild reaction conditions and with high chemo-, regio-, and stereoselectivity. This Special Issue scope is devoted to the latest advancements in this exciting area of synthetic Chemistry. Both original research papers and reviews are welcomed. The scope is broad and may include the elaboration of novel and more performing catalysts, including heterogenous catalysts, as well as the development of new carbonylation processes in conventional and/or nonconventional solvents for the synthesis of products of industrial interest and of fine chemicals, including bioactive compounds.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn
Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.9 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the second half of 2025).
