

Special Issue

Palladium Catalysts for Cross-Coupling Reaction

Message from the Guest Editor

Palladium is definitely one of the most important transition metals in organic synthesis. The significance of palladium catalysts is evident by the fact that the Nobel Prize in Chemistry 2010 was awarded to Richard F. Heck, Ei-ichi Negishi, and Akira Suzuki “for palladium-catalyzed cross couplings in organic synthesis”. Though the cross coupling chemistry emerged during the 1970s, this research field is still evolving and considerable attention is being given to investigate new catalytic reactions such as stereo- and site-selective cross coupling, reactions with less reactive leaving groups, and cross coupling at C-H positions. This special issue will cover significant development in the exciting field of palladium-catalyzed cross coupling.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn

Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
