

## Special Issue

# Catalysis for Environmentally Benign Production of Alternative Fuels

### Message from the Guest Editor

Environmentally benign productions of chemical intermediates and clean fuels from alternative feedstock have been getting attractive recently due to a fast depletion of oil reservoirs. Among them, syngas conversions into a broad range of fuel-grade hydrocarbons such as gasoline, diesel, jet fuel, oxygenates including dimethyl ether and alcohols, and chemical intermediates such as light olefins and aromatics are more interested as core technologies of C1 chemistry. Those productions from various hydrocarbon feeds can also replace the existing petroleum-derived products. The present Special Issue focuses on the fundamental investigations to develop novel heterogeneous catalysts for the productions of chemical intermediates as well as clean fuels based on C1 chemistry from alternative feedstock such as natural gas and CO<sub>x</sub>. Both fundamental and applied research in terms of novel catalytic systems and gas-phases reactions by environmentally benign processes are sincerely invited, especially in the fields of C1 chemistry-based heterogeneous catalysis.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Keith Hohn

Carl R. Ice College of Engineering, Kansas State University, Manhattan,  
KS, USA

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

##### Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science )

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
