

Special Issue

Nanostructures for Photochemical Transformation Applications

Message from the Guest Editor

Photocatalysis is a greener approach to transform abundantly available free photonic energy into valuable chemical energy. Nanotechnology offers the facility to researchers to tune the properties of materials by controlling their size and structures. This Special Issue covers the synthesis, characterization, and photochemical transformations of various photoactive nanostructures and their composites. We invite authors to contribute their original research articles as well as review articles for photochemical transformations and environmental remediation applications.

Guest Editor

Dr. Hemraj M Yadav

Department of Energy and Materials Engineering, Dongguk University, Seoul, Republic of Korea

Deadline for manuscript submissions

closed (30 November 2021)

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn

Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
