

Special Issue

Photocatalysis and Renewable Materials

Message from the Guest Editors

Modern science can no longer do without taking into consideration the protection of the environment and the intelligent use of natural resources. From this point of view, photocatalysis is an excellent candidate to be included in sustainable chemistry. The use of renewable materials, both directly for the preparation of the catalyst or indirectly for the fuel production or depollution, united to the possible use of solar light, is the main purpose of this Special Issue. Topics can include (but are not limited to): - Fuel production (i.e. hydrogen) from renewable resources; - Sustainable (hybrid) photocatalysts; - Nano and nanostructured materials; - Photocatalytic water treatment and renewable energy applications; - Photocatalytic water oxidation and reduction assisted by waste sacrificial donors; - Photocatalytic CO₂ reduction into renewable fuels.

Guest Editors

Dr. Daniele Dondi

Dr. Dhanalakshmi Vadivel

Dr. Andrea Speltini

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn

Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
