## Tuberculosis: From Pathogenesis to Targeted Therapies

Guest Editor:

### **Dr. Christoph Hölscher**

Research Center Borstel - Leibniz Lung Center, Division of Infection Immunology, 23845 Borstel, Germany

Deadline for manuscript submissions:

**31 August 2024**

### **Message from the Guest Editor**

Most bacterial infections can quickly be cured by antibiotic monotherapy. In contrast, drug-sensitive tuberculosis (TB) must be treated with a combination of four antibiotics over 6 months. This lengthy, multidrug regimen often confounds compliance, leading to treatment failure, recurrence of TB, and the emergence of antibiotic-resistant mycobacteria. The goal of current TB research is, therefore, not only the development of new antibiotics and identification of novel antibiotic targets but also to find therapies that shorten treatment time. One reason for the need for such a long-term therapy is the development of centrally necrotizing granulomas in TB patients. New drugs and regimens for the therapy of TB must consider the pathogenesis of this complex disease, ensuring that compounds can reach their target and act more effectively within the habitat of centrally necrotizing granulomas.

This Special Issue aims to cover new research on the pathogenesis of TB in terms of therapy and novel compounds, as well as present host-directed strategies that mediate better and faster antibiotic treatment through modulation of the pathology.

## Editors-in-Chief

**Prof. Dr. Alexander E. Kalyuzhny**

Neuroscience, UMN Twin Cities,  
6-145 Jackson Hall, 321 Church St  
SE, Minneapolis, MN 55455, USA

**Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation  
Centre, The University of  
Copenhagen, Copenhagen,  
Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
