State of the Art in Idiopathic Pulmonary Fibrosis

Guest Editors:

Prof. Dr. Malgorzata Wygrecka

Center for Infection and Genomics of The Lung, Justus-Liebig University Giessen, Aulweg 132, 35392 Giessen, Germany

Prof. Dr. Elie El Agha

Institute for Lung Health (ILH), Justus-Liebig University Giessen, Aulweg 132, 35392 Giessen, Germany

Deadline for manuscript submissions:

closed (30 November 2021)

Message from the Guest Editors

Idiopathic pulmonary fibrosis (IPF) is a lethal disease of unknown etiology, elusive pathogenesis, and very limited therapeutic options. The onset and progression of IPF are influenced by multiple environmental and intrinsic factors, such as exposure to harmful substances, aging and genetic predisposition; however, the magnitude of the contribution of these factors to IPF and the chronological order of downstream pathogenic events remain uncertain. The main hallmarks of IPF are the abnormal activation of lung epithelial cells and the accumulation of fibroblasts/myofibroblasts along with the excessive deposition of extracellular matrix proteins. Recent technological advances and interdisciplinary approaches unmasked the involvement of a broad spectrum of molecular and cellular mediators in the pathogenesis of IPF. By critically evaluating the complexity of the disease and the translational value of pre-clinical studies, we would like to provide here a platform for conceptual and technological innovation in the field of IPF and shed light on new therapeutic strategies that may become a part of future treatment options.

Special Issue

cells

an Open Access Journal by MDPI

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
