# **Message from the Collection Editors**

The complex bidirectional communication system existing between the gastrointestinal tract and the brain, termed the "microbiota-gut-brain axis".

The large community of microorganisms embedding the gut and the host organism are now considered as composite and co-evolved organisms.

Among microbial metabolites, bile acids, short-chain fatty acids and tryptophan are detectable in different biological compartments, including feces and cerebrospinal fluid and exert important and diverse effects on host physiology, influencing the immune response, the integrity of the epithelial barrier to pathogen invasion, endocrine and neuronal functions giving rise to a microbiota-mediated bottom-up control of the central nervous system.

Research in this area opens the exciting possibility to target microbial metabolites to clarify the role of the bacterial microbial flora in the pathogenesis of both gastrointestinal and brain disorders, as well as to discover new therapeutic strategies based on the administration of these "postbiotic" agents.

# **Editors-in-Chief**

#### Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE, Minneapolis, MN 55455, USA

#### Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

## **Message from the Editorial Board**

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
