Molecular and Cellular Basis of Autoimmune Diseases

Guest Editor:

Dr. Yasmina Juarranz

Department of Cell Biology, Faculty of Biology and Faculty of Medicine, Complutense University of Madrid (UCM), 28040 Madrid, Spain

Deadline for manuscript submissions:

closed (30 November 2020)

Message from the Guest Editor

Dear Colleagues,

The characteristics of autoimmune diseases make them one of the main objectives of study in the biosanitary field, since they affect a wide spectrum of the population. Genetic background, epigenetic modifications, environmental factors are regarded as aetiological factors, and, as a consequence, an inadequate immunological tolerance towards critical self-antigens is induced, which is characteristic of all autoimmune diseases. During the whole process, a cascade of events takes place leading to a variety of molecular and cellular alterations that can be both cause or consequence of these pathologies. This Special Issue will summarize the latest molecular and cellular mechanisms involved in autoimmune diseases. both as a consequence and as a cause of them. The use of molecular and cellular targets as potential therapies to prevent or treat the progression of these diseases will also be addressed

We look forward to your contributions.

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. Cells encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
