# Cilia and Flagella: Structure, Function and Beyond

Collection Editors:

#### Dr. William Tsang

Institut de Recherches Cliniques de Montréal (IRCM) Research Unit Director, Cell Division and Centrosome Biology, 110 Avenue des Pins Ouest, Montréal, QC, Canada

#### Dr. Gang Dong

Computational and Structural Biology, Max F. Perutz Laboratories, Medical University of Vienna, Vienna, Austria

**Message from the Collection Editors** 

Dear Colleagues,

Cilia and flagella have evolved to perform diverse functions, such as locomotion, mucus clearance, fluid circulation, chemosensation, and mechanosensation. It is now known that defects in cilia and flagella assembly or function give rise to a wide spectrum of human diseases including infertility, loss of vision, kidney cysts, respiratory defects, skeletal anomalies, and neurological disorders. In spite of functional differences, cilia and flagella are remarkably similar in terms of molecular composition and structure, consisting of stabilized microtubules arranged in a nine-fold radial symmetry.

The Special Issue focuses on current advances in the biology of cilia and flagella. We welcome contributions that include, but are not limited to, structural and functional studies of cilia/flagella, different cilia/flagella model mechanisms systems, of cilia/flagella assembly. and disassembly, mechanisms maintenance, of cilia/flagella-mediated sensing mechanisms and signal transduction, link between cilia/flagella and the cell cycle or other relevant cell physiological processes implicated in disease.

# **Editors-in-Chief**

#### Prof. Dr. Alexander E. Kalyuzhny

Neuroscience, UMN Twin Cities, 6-145 Jackson Hall, 321 Church St SE, Minneapolis, MN 55455, USA

#### Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

### **Message from the Editorial Board**

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

# **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics* and *Molecular Biology*)
