Glial Cells in Synaptic Plasticity

Guest Editors:

Dr. Jean-Pierre Mothet

Prof. Dr. Vladimir Parpura

Dr. Marta Navarrete I linás

Dr. Giovanni Cirillo

Deadline for manuscript

closed (15 June 2023)

submissions:

Message from the Guest Editors

Three decades ago, emblematic studies brought glial cells out of the shadows and then transformed modern neuroscience. Nowadays, glial cells are recognized as active partners of neurons supporting an amazing array of functions in the developing and mature brain but also contributing to neurological and psychiatric diseases and injury processes. It appears clearly that glial cells contribute to almost every aspect of brain computation and seems to guide our daily life. The field is still expanding at an accelerating pace.

For this Special Issue, we welcome all types of manuscripts (Article, Review, Hypothesis, Opinion, Perspective) providing biological insights into the particular roles of glial cells in synaptic and circuits functional and structural plasticity and the implication to cognition in the healthy and diseased nervous system in any animal models including organoids. Emphasis will be given to emerging technological and methodological (theoretical and experimental) tools that offer new avenues to refine our understandings of glia (dys)functions in brain computation.

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics* and *Molecular Biology*)
