## Immunosuppressive Myeloid Cells in Cancer and Pathophysiological Conditions

Guest Editors:

**Dr. Justin Lathia**

Cleveland Clinic Lerner Research Institute/Case Comprehensive Cancer Center, Cleveland, OH, USA

**Dr. Defne Bayik**

Cleveland Clinic Lerner Research Institute/Case Comprehensive Cancer Center, Cleveland, OH, USA

Deadline for manuscript submissions:

**closed (31 March 2021)**

### Message from the Guest Editors

As you are aware, immunosuppressive myeloid cells, including macrophages, myeloid-derived suppressor cells (MDSCs) and neutrophils, are dysregulated in a wide-spectrum of pathophysiological conditions ranging from cancer to autoimmune diseases to infection. In addition to serving as biomarkers, these cells play a central role in the manifestation and progression of disease states by altering immune response and supporting the disease microenvironment. Mechanisms leading to accumulation of immunosuppressive myeloid cells and their downstream impact remain areas of intense research interest and are promising fields for therapeutic development.

This Special Issue seeks original research papers and reviews from a broad range of topics related to the tumor-promoting role of myeloid cells, their function in autoimmune diseases/inflammatory conditions, changes in the myeloid cells in the context of infection/metabolic diseases, their potential as disease biomarkers, heterogeneity in immunosuppressive mechanisms and altered signaling pathways leading to myeloid cell dysfunction.

We look forward to your contribution.

## Editors-in-Chief

### **Dr. Alexander E. Kalyuzhny**

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE, Minneapolis, MN 55455, USA

### **Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
