Deadline for manuscript  
submissions:  
**closed (31 May 2022)**

### **Message from the Guest Editor**

Dear Colleagues,

Alterations in mammary development have been associated with modified breast cancer risk for decades. Recent breakthroughs in stem cell technology, functional genomics, and epigenetics have significantly advanced our understanding of the role of mammary stem and progenitor cells in the transition of the critical stages of mammary development. The changes in mammary stem cell repopulation and dynamics are accompanied by the activation of a plethora pathways, such as Wnt and Notch signaling. Therefore, elucidating the mechanism of mammary stem cell reprogramming and identifying the factors that modulate this process are critical to advancing our understanding of breast cancer etiology and developing targeted chemoprevention strategies against breast cancer. We expect the reports in this Special Issue to facilitate the “decoding” of mammary stem cell reprogramming in development and tumorigenesis, which could be applied to breast cancer prevention and treatment. We are looking forward to your contributions to this Special Issue.

For further information, please visit the Special Issue [website](#).

## Editors-in-Chief

**Prof. Dr. Alexander E. Kalyuzhny**

Neuroscience, UMN Twin Cities,  
6-145 Jackson Hall, 321 Church St  
SE, Minneapolis, MN 55455, USA

**Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation  
Centre, The University of  
Copenhagen, Copenhagen,  
Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
