## Integration of Omics Data with Machine Learning and Literature Mining: An Accurate and Fast Approach in Drug Repurposing and Comprehensive Systems Biology

Guest Editors:

**Dr. Esmail Ebrahimie**

**Prof. Dr. Matthias Kohl**

**Dr. James Perkins**

Deadline for manuscript  
submissions:  
**closed (15 January 2023)**

### Message from the Guest Editors

The development and widespread use of next-generation sequencing (NGS) technologies founded the era of big data in biology and medicine. In particular, it led to an accumulation of datasets that opened up a vast number of possible applications for data-driven methodologies. However, NGS-based studies usually utilized small sample sizes, and thus many research results gave low reproducibility rates in followed studies. Hence, the meta-analysis of available data from several studies was soon identified as the appropriate technique to obtain adequate sample sizes and optimal strength for the detection of genetic associations.

Also, data-driven NGS research areas have tailored data mining technologies such as machine learning. A machine learning model can incorporate prior knowledge from different omics data. Subsequently, the models can identify hidden knowledge, patterns, and relationships in an enormous amount of NGS information.

The combination of machine learning and meta-analysis in the analysis of multiple NGS experiments simultaneously may open up a new avenue to use publicly available data to better uncover key molecular factors and underlying mechanisms in omics studies.

## Editors-in-Chief

### **Prof. Dr. Alexander E. Kalyuzhny**

Neuroscience, UMN Twin Cities,  
6-145 Jackson Hall, 321 Church St  
SE, Minneapolis, MN 55455, USA

### **Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation  
Centre, The University of  
Copenhagen, Copenhagen,  
Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics and Molecular Biology*)
