Cell and Tissue Engineering for Functional Analysis

Guest Editor:

Message from the Guest Editor

Prof. Dr. Masamichi Kamihira Department of Chemical Engineering, Faculty of Engineering, Kyushu University, Fukuoka 819-0395, Japan

Deadline for manuscript submissions: closed (30 September 2022) Functional expression in tissues and organs is determined by the gene expression profile at the cellular level. Many innovations have been made to evaluate the functions of tissue and organ cells, and knowledge to explain the biological phenomena observed in the tissue and organ cells has been accumulated using these technologies. Recently, stem cell engineering, genome engineering, and synthetic biology have been added to this approach, and cell-based engineering methods have been used to control the cellular response to internal factors and stimuli from the extracellular environment. By incorporating an artificial gene circuit into a cell, its function can be changed autonomously. Rewriting genetic programs encoded on the genome determine the fate and longevity of cells based on cell function. The fabrication of tissues made with cells that perform the functions designed by direct control of the cellular gene expression profile at the genomic level may bring advances in biomedical engineering. This Special Issue deals with the latest research on cell function analysis and its medical applications using technologies such as genome editing, AI, bioprinting, and microfluidics.

Editors-in-Chief

Prof. Dr. Alexander E. Kalyuzhny

Neuroscience, UMN Twin Cities, 6-145 Jackson Hall, 321 Church St SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics* and *Molecular Biology*)
