

## Special Issue

# Advances in Muscle Research in Health and Disease—2nd Edition

### Message from the Guest Editor

Muscles, consisting of skeletal, cardiac, and smooth muscle, comprise a significant portion of total body mass and are primarily essential for vital human functions. Muscle is also the largest depot for glucose disposal, amino acid storage, and whole-body metabolism coordination via the consumption, distribution, and transportation of nutrients and other substrates. Muscle homeostasis is regulated by both endogenous and exogenous factors, which interact to influence both its structure and function. The advances in dietary, pharmacological, and therapeutic strategies to maintain muscle health, while stressing the prevention and understanding of muscular-system-related disorders, have highlighted the significance of muscle in recent decades. This Special Issue will explore new insights, aiming to present the most recent findings and advances in this field and outlining prospects in all aspects of muscle research. We encourage original research articles as well as review articles on the structure, types, development, regeneration, functions, and roles of muscles, in addition to discussions of muscle-derived disorders that may affect human health.

### Guest Editor

Prof. Dr. Wan Lee

1. Department of Biochemistry, Dongguk University School of Medicine, Gyeongju 38066, Republic of Korea
2. Channelopathy Research Center (CRC), Dongguk University School of Medicine, Ilsan 10326, Republic of Korea

### Deadline for manuscript submissions

30 November 2025

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

---

### Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,  
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,  
Copenhagen, Denmark

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
