Current Advances in Plant Gene Regulatory Networks

Message from the Guest Editor

One of the principal features of living organisms is their ability to adapt to their ever-changing environment using an incredible variety of strategies. Plants are sessile organisms, so changing locations is not an option for adaptation for them. Instead, plants employ complex sensing and signaling systems to constantly monitor the parameters of the environment (e.g., light, temperature, availability of water, etc.) and respond to their alterations with an orchestrated modulation of gene expression. Reprograming of specific gene sets eventually leads to changes in metabolism, development, and growth to accommodate the actual conditions. The aim of this Special Issue is to collect research articles and review papers that illustrate the unparalleled diversity and complexity of plant signaling and regulatory systems, including, but not limited to, light- and circadian clock-regulated gene expression, temperature sensing and thermomorphogenesis, molecular responses to water/drought/osmotic/saline stress, sensing and responding to biotic stress, hormonal regulation of development, and flowering time determination.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
