

## Special Issue

# Synapses: Molecular Organization, Regulation and Synaptic Function

### Message from the Guest Editor

Synapses are highly organized subcellular compartments specializing in synaptic transmission and many forms of synaptic plasticity. Glutamate receptors, GABAA receptors, signaling molecules, and cell adhesion molecules constitute essential components in supporting synaptic function. Efficient signal transduction at synapses requires scaffolding proteins which bring signaling molecules in close physical proximity to their effectors, forming a signaling center. The activity-dependent reorganization of signaling molecules to the physical proximity of their effector via trafficking/regulation of their scaffolding proteins is critical for the modification of multiple classes of proteins. Understanding how signaling molecules are regulated by their scaffolding proteins and other modulators will help elucidate the panoply of mechanisms that underlie synaptic plasticity. Moreover, understanding how this organization is perturbed in different neurological diseases will help identify putative therapeutic pathways. We invite research or review articles on any subjects related to molecular organization and its regulation associated with synapse function and neural plasticity.

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

---

### Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,  
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,  
Copenhagen, Denmark

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
