

## Topical Collection

# Regulation of Cell Function by AMPK and Sirtuins: From Basic Research to Disease and Aging

### Message from the Collection Editors

5'-AMP-activated protein kinase, or AMPK, is a multidimensional kinase that acts as an energy sensor, in addition to regulating numerous cellular processes involved in cell survival, health and lifespan. The close partners of AMPK are the sirtuins, a family of evolutionarily conserved NAD<sup>+</sup>-dependent protein deacetylases that are also widely considered to be metabolic sensors. Both AMPK activity and SIRT1 abundance/activity are reduced with aging, overnutrition or physical inactivity, which may lead to numerous pathologies and diseases, such as diabetes, cancer, inflammation and cardiovascular as well as neurodegenerative diseases. Authors are invited to submit manuscripts in all areas of current AMPK or sirtuins research, with an emphasis on basic as well as translational aspects. Studies addressing age-related changes in AMPK and sirtuin signaling are explicitly encouraged. This Topical Collection welcomes up-to-date hypotheses, reviews, research articles and short communications. Clinical studies, if relevant, as well as computational modeling are also welcome.

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
