The Role of Inflammation in Atherosclerosis and Coronary Artery Disease

Message from the Guest Editors

Atherosclerosis is the pathological basis of coronary artery disease, ischemic stroke, and peripheral arterial disease. Despite optimal treatment with drugs to alleviate hyperlipidemia and hypertension and prevent thrombotic complications, this disease continues to be the leading causes of morbidity and mortality worldwide. Thus, there is a medical need for understanding the pathogenesis of atherosclerosis and finding new targets to combat the disease. Inflammation is a key process that drives the initiation, progression, and even rupture of atherosclerotic plaques. Dyslipidemia, hypertension, obesity, and type 2 diabetes have been identified as major risk factors for atherosclerosis. Deciphering the crosstalk between major risk factors and inflammation in atherosclerosis should lead to a better understanding of the pathophysiological mechanisms and would help identify new targets and develop better therapeutical strategy for treatment. In this Special Issue, we will consider both original and review articles that centered on molecular and genetic aspects of inflammation in atherosclerosis. We look forward to receiving your contributions.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
