Stem Cells in Organoid Technology

Message from the Guest Editor

Pluripotent stem cells, including embryonic stem cells, and induced pluripotent stem cells, which can differentiate into any cell in the body. Adult stem cells are multipotent, which means they can only change into some cells in the body, not any cell. Their unique characteristics to differentiate into other cell types (pluripotency) allow us to use stem cells as valuable tools for research and therapeutic applications. During the past few decades, stem cell differentiation technology has made remarkable progress. Additionally, organoid technology has recently been developed. Organoids are three-dimensional cell structures grown in vitro from stem cells, primarily isolated from biopsies or pluripotent stem cells, which recapitulate key features of native organs from a histological and functional perspective. Organoids can be widely utilized for various purposes, such as organ development, disease modeling, drug development, regenerative medicine, etc. This Issue will focus on the development of innovative technologies in the generation of pluripotent stem-cell-derived organoids and their application in disease modeling and regenerative medicine.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
