Roles of Cytokines in Skin Inflammation

Message from the Guest Editor

The skin, the largest organ in the human body, primarily protects against harmful environmental influences and prevents dehydration; thus, it represents the first barrier against physical, biological and chemical stress. To maintain this function, keratinocytes undergo a differentiation process that culminates in the generation of corneocytes. Keratinocytes and other resident skin cells produce cytokines that are responsible for controlling cellular communication. Cytokines are intercellular signalling proteins that serve as key modulators of the immune system and inflammation and initiate their biologic action by interacting with target cells bearing cytokine receptors, initiating a cascade of cellular interactions. Cytokine signalling can result in multiple consequences for the skin's barrier function. Certain inflammatory skin diseases are associated with cytokine overproduction, dysregulation and alteration in their receptors, including atopic dermatitis (AD), allergic contact dermatitis and psoriasis. This Special Issue summarizes the current knowledge on cytokines and their functions in healthy skin and contributions to inflammatory skin diseases.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
