

Special Issue

Flow Cytometry: Basic Principles and Applications

Message from the Guest Editors

Flow cytometry is an indispensable technique in clinical diagnostics and immunological and hematological research. This Special Issue in *Cells* will highlight the powerful applications of this technique as well as the pitfalls in both data acquisition and interpretation. Several aspects will be discussed in detail: Firstly, data pre-processing with a focus on: i. correct settings of the hardware and ii. correct transformation of the data to avoid erroneous results caused by inadequate processing. Secondly, the vast increase in fluorescent labels comes with essential and complex issues associated with correct compensation. Thirdly, as the data obtained via cytometry are multidimensional in nature, the choice of dimension reduction algorithms is key. Finally, the translation of algorithms described in complex software environments such as R, Matlab and Python must be applied to easy-to-use and intuitive graphical user interfaces, aiding care professionals' clinical decision making with limited background in flow cytometry. Several articles will describe newly developed applications both based on multicolor fluorescence and multi-mass cytometry.

Guest Editors

Prof. Dr. Leo Koenderman

Dr. G. H. Tinnevelt

Dr. Nienke Vrisekoop

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
