Impact of Platelet Defects on Pathophysiological Processes II

Message from the Guest Editors

Platelets play a major cellular role in the regulation of coagulation and thrombosis. Platelets are non-nucleated ligaments from megakaryocytes that exhibit multiple interactions with the vascular endothelium and provide a procoagulant surface that is crucial to clot formation. Additionally, platelets have been shown to act as mediators of immunity and inflammation, either by direct interaction with immune cells or by the granule release of proinflammatory/immunomodulating molecules. Consequently, platelet dysfunction, be it hereditary, acquired, or pharmacologically induced, contributes to various pathological processes, such as bleeding, thrombosis, acute/chronic inflammation, metastasis, and bacterial infection. This Special Issue aims to promote research investigating how platelets are involved in various pathophysiological processes, and how specific platelet defects contribute to the development and progression of disease. Therefore, we welcome basic research on cellular/molecular interactions.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
