New Developments in Inflammatory Skin Diseases

Message from the Guest Editor

The skin is a large niche for a highly specialized immune system. It provides first-line barrier protection from pathogens and also orchestrates tolerance to a diverse community of commensal microbes. Dysregulation of the cutaneous immune system results in many chronic inflammatory skin diseases. Specific T cell subsets have been attributed roles in the pathogenesis of chronic inflammatory diseases. Th17 cells, for example, play important roles in the pathogenesis of psoriasis. Th2 cells, on the other hand, are important in atopic dermatitis. Treg dysregulation and roles for other T cell subsets and their functional states have been reported to be relevant for these and other skin diseases. The reasons and mechanisms for T cell dysregulation in the human skin are poorly understood. An aberrant host-microbiota crosstalk has recently emerged as a potential cause for skin diseases. Other factors from the skin microenvironment such as ions, metabolites, and hormones also have an impact on skin immunity. In this Special Issue, new developments in the pathogenesis of inflammatory diseases and their response to new treatments and immunomodulation will be gathered.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
