Special Issue

Lysosomal Storage Disease: From Molecular Mechanisms to Therapeutic Opportunities

Message from the Guest Editor

Lysosomal storage disorders have been known for decades to be multisystem disorders with a variable onset and course. The molecular basis is increasingly being elucidated and therapeutic strategies are becoming more developed with growing expertise in targeted cellular and genetic therapies. Early diagnosis represents a challenge as therapeutic effects can mainly be achieved early in the disease course. Quite recent is interest in the role of lysosomes in a number of adult neurodegenerative disorders, such as Parkinson's disease and Alzheimer's disease. Although not of monogenetic origin, heterozygous and homozygous mutations in lysosomal genes are amongst the highest genetic risk factors and lysosomal dysfunction may enhance the neurodegenerative process. We invite you to contribute to this Special Issue of Cells, which is dedicated to these disorders. Contributions on cell biology, molecular biology, and biophysics are as welcome, as are clinical studies covering the natural history or therapeutic aspects.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny
Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch
Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
