Molecular Insights in Multiple Myeloma Pathogenesis

Message from the Guest Editor

In the last few years, extensive preclinical research has led to impressive progress in the comprehension of the pathogenesis of multiple myeloma (MM). Indeed, the development of cell lines and the possibility to isolate primary malignant plasma cells and surrounding microenvironmental cells from the tumor bed have allowed investigators to apply “omics” assays to dissect the molecular pathways involved in the onset and progression of the disease. Furthermore, the peculiar natural history of MM, arising from asymptomatic stages, has prompted advanced studies of clonal dynamics and evolution which represent the basis of future investigations in other solid and hematological tumors. The scope of this Special Issue is to collect original contributions from expert researchers in the field of MM molecular biology to outline the state-of-art of preclinical research and future perspectives in this area. About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
