

Special Issue

Neurological Symptoms and COVID-19 Pandemic

Message from the Guest Editors

COVID-19 induces an inflammatory response and, in severe cases, a cytokine storm can damage the CNS. Patients with COVID-19 infection are at increased risk for thrombotic events as various anticoagulation regimens are now being considered for these patients, and different types of vaccines are not free from side effects and intracranial complications. Endothelial dysfunction, activation of the renin-angiotensin-aldosterone system (RAAS) with the release of procoagulant plasminogen activator inhibitor (PAI-1) and hyperimmune responses with activated platelets seem to be significant contributors to thrombogenesis in COVID-19. This Special Issue will contribute significantly to the development of anti-COVID-19 strategies by collecting and publishing innovative concepts, suggestions and research data for the identification and validation of specific drug targets and cell-mediated immunity. We welcome original papers, systematic reviews, meta-analyses, clinical images and reviews on this interesting and topics that lay emphasis on neuroinflammation, specific drug targets, hyperimmune responses and clinical neurological symptoms.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
