

## Special Issue

# Stem Cells to the Rescue: Development and Application of Cell-Based Therapy for Microvascular Repair

### Message from the Guest Editors

Important roles for stem cells in health and disease continue to emerge. These multipotent undifferentiated cells are endowed with the ability to divide and produce additional stem cells or specialized differentiated progeny. Adult stem cells reside in most organs and tissues, often in niches, and constitute an enduring source for cellular turnover and to replace or repair injured cells. For example, bone-marrow-

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
